

5 CLAUDE.md Templates

Copy-paste templates for the most popular tech stacks

By @koki7o • thedevfounder.com

March 2026

1. React + TypeScript + Vite

Frontend

```
# React App

## Stack
- React 18+ with TypeScript
- Vite for bundling
- Tailwind CSS for styling
- Vitest + React Testing Library

## Commands
- Dev: `npm run dev`
- Build: `npm run build`
- Test: `npm test`
- Lint: `npm run lint`

## Conventions
- Functional components only
- Named exports, never default
- PascalCase components, camelCase hooks
- One component per file
- Props: [Component]Props interface

## File Structure
- src/components/ - UI components
- src/pages/ - route pages
- src/hooks/ - custom hooks
- src/api/ - API client functions

## Important
- Never use `any` - use `unknown`
- All API calls through src/api/
- Error boundaries on routes
```

2. Node.js + Express + PostgreSQL

Backend

```
# Express API

## Stack
- Node.js with TypeScript
- Express for HTTP
- PostgreSQL with pg
- Jest + Supertest for testing

## Commands
- Dev: `npm run dev` (nodemon)
- Build: `npm run build`
- Test: `npm test`
- Migrate: `npm run migrate`

## Conventions
- Controllers → HTTP only
- Services → business logic
- Repositories → database queries
- Return: { data, error, meta }
- async/await, never callbacks

## Database
- Parameterized queries ($1, $2)
- Never string interpolation
- Transactions for multi-table writes
- Sequential migration files

## Important
- Never commit .env files
- Validate env vars at startup
- Rate limit public endpoints
- Validate input with zod
```

3. Python + FastAPI

Backend

```
# FastAPI App

## Stack
```

4. Go + Chi/Gin

Backend

```
# Go API

## Stack
```

- Python 3.11+, FastAPI, Pydantic v2
- SQLAlchemy 2.0 async + PostgreSQL
- Alembic migrations
- pytest + httpx

Commands

- Dev: `uvicorn app.main:app --reload`
- Test: `pytest`
- Lint: `ruff check .`
- Migrate: `alembic upgrade head`

Conventions

- Type hints on everything
- Pydantic for all schemas
- Dependency injection for DB, auth
- Async everywhere
- snake_case (classes: PascalCase)

File Structure

- app/routers/ – API routes
- app/models/ – ORM models
- app/schemas/ – Pydantic schemas
- app/services/ – business logic
- app/deps/ – DI functions

Important

- No `from app import \*`
- Secrets from env vars only
- CORS: specific origins in prod
- Background tasks for >500ms

- Go 1.22+, Chi/Gin routing
- PostgreSQL with pgx
- golang-migrate
- Go testing + testify

Commands

- Run: `go run cmd/server/main.go`
- Test: `go test ./...`
- Build: `go build -o bin/server`
- Lint: `golangci-lint run`

Conventions

- Accept interfaces, return structs
- Always check errors
- Context as first param for I/O
- Table-driven tests
- No init() functions

File Structure

- cmd/server/ – entry point
- internal/handler/ – HTTP
- internal/service/ – logic
- internal/repository/ – DB
- internal/model/ – types

Error Handling

- Custom types implementing error
- Wrap: `fmt.Errorf("ctx: %w", err)`
- Never panic in library code

Important

- `go vet ./...` before commit
- No global mutable state
- Graceful shutdown
- Structured logging (slog)

▲ 5. Next.js Full Stack

Full Stack

Next.js App

Stack

- Next.js 14+ App Router
- TypeScript strict mode
- Tailwind CSS
- Prisma ORM + PostgreSQL
- NextAuth.js for auth

Commands

- Dev: `npm run dev`
- Build: `npm run build`
- Test: `npm test`

Conventions

- App Router (app/), not Pages
- Server Components by default
- "use client" only when needed
- Server Actions for mutations
- Zod for all validation

Auth

- NextAuth in lib/auth.ts
- getSession() on server
- useSession() on client

Important

```
- Prisma: `npx prisma migrate dev`  
- Studio: `npx prisma studio`
```

```
- No server imports in Client Components  
- NEXT_PUBLIC_ for client env vars  
- next/image for all images  
- Metadata in page.tsx for SEO
```

How to Use These Templates

1

Pick your stack

2

Create `CLAUDE.md` in project root

3

Paste & customize

4

Claude reads it every session ✓
